

Programs, data,
directions, and results

User domain

**Machine
domain**

Program
execution

A diagram illustrating the interaction between a User domain and a Machine domain. The User domain is represented by a light gray rectangular area at the top. The Machine domain is represented by a light gray rectangular area at the bottom. Inside the Machine domain, there is a light gray rounded rectangle labeled "Program execution". Four vertical arrows connect the two domains: two arrows point upwards from the Machine domain to the User domain, and two arrows point downwards from the User domain to the Machine domain. The text "Programs, data, directions, and results" is positioned above the arrows, indicating the nature of the data being exchanged.
